Professional Summary Software Engineer with 23 years of practical experience in software development, high-performance systems, process automation, and backend solutions. Expertise in building reliable tools, APIs, and system integration using modern technologies.

Currently focused on full-stack and backend development, with strong skills in Python, Rust, Linux environments, and real-time systems. Interested in contributing to NVIDIA's software and systems teams in areas such as GPU computing, cloud infrastructure, and development tools.

Professional Experience

Founder & Principal Architect – QuantumEnergyOS (Personal Research & Development Project) 2024 – Present

- Designed and implemented high-performance backend components using **Rust** and **Python/Flask**.
- Developed real-time monitoring APIs and dashboards with **React + TypeScript**.
- Integrated advanced computing technologies, including quantum simulation tools (Qiskit and Q#).

Founder & Lead Technician – Geese-PC Mexicali, Baja California | 2003 – Present

- Created automation scripts and backend tools in **Python** and **Bash** to optimize diagnostic processes and data management.
- Managed critical data recovery and secure system operations with a consistent 95% success rate.
- Maintained Linux-based infrastructures and provided technical consulting on system reliability.

Technical Skills

- **Programming Languages:** Python, Rust, C++, JavaScript, TypeScript, Bash
- **Frameworks & Tools:** Flask, React, Next.js, Node.js, Git
- **Platforms:** Arch Linux (Artix), Azure, TCP/IP networking, high-performance systems

- **Other:** API Development, Process Automation, Linux System Administration, Data Processing

Education Bachelor's Degree in Information Technologies and Digital Innovation (In Progress) Universidad Politécnica de Baja California | 2025 – Present

Languages Spanish (Native) • English (Intermediate)
